

DAMOLA TOMMY AKINYOMI

dammy0075@gmail.com | [GitHub](#) | [LinkedIn](#)

Skills

- Angular 12 - 21 | TypeScript | JavaScript (ES6+) | Node.js | NestJS | Express.js
- MongoDB | PostgreSQL | Redis | PrismaORM | TypeORM
- Angular Signals | RxJS | NgRx | Tailwind | SCSS | RESTful APIs | Microservices
- JWT | RBAC | MFA | Authentication & Security
- Docker | CI/CD (Github Actions) | NginX | AWS | RabbitMQ | Event-Driven Systems
- Jira | Confluence | Git | Postman | Agile

Experience

Senior Full-Stack Engineer / DevOps (NestJS, Angular, AWS), The Oh-Res Ltd, Canada. Oct 2025 – March 2026

- Led full-stack architecture and delivery of a production, enterprise ERP system using NestJS (backend) and Angular 20 (frontend), delivering scalable, secure, and high-performance features used by thousands of users daily.
- Designed and implemented 8 independent microservices with Node.js/NestJS RESTful APIs, API Gateway, rate limiting, CORS, and intelligent routing.
- Built and maintained the complete Angular 20 frontend with modular architecture, Angular Signals state management, lazy loading, and permission-based security.
- Developed advanced authentication and authorization systems including JWT, refresh tokens, MFA (TOTP), RBAC, with comprehensive audit logging.
- Architected event-driven systems using RabbitMQ for real-time data communication between services.
- Collaborated closely with product and design teams to translate business requirements into clean, maintainable, technical solutions while ensuring performance and scalability.
- Designed and implemented AWS cloud infrastructure including ECS cluster orchestration, ECR private registry, RDS PostgreSQL 15 with multi-AZ deployment, VPC architecture with security groups, and CloudWatch monitoring.
- Built CI/CD pipelines using GitHub Actions for backend (matrix-based parallel builds, sequential deployment with health monitoring), and AWS Amplify for frontend.
- Architected RabbitMQ-based event-driven system with topic exchanges, dead letter queues, and message persistence handling Finance, Inventory, Order, Warehouse, User, and Tenant events across distributed services.
- Designed multi-tenancy architecture with shared database model, row-level tenant isolation using companyId, JWT token-based tenant context propagation, and metadata management for company-specific configurations.
- Implemented robust cookie-based token delivery with httpOnly/secure flags, automatic token refresh (using Angular interceptors) with exponential backoff, RBAC with permission guards, and route-level security enforcement.

- Built a RAG (Retrieval-Augmented Generation) pipeline using LangChain and GPT-4o to power a context-aware AI chat assistant, grounding responses in live company data retrieval from a vector store.
- Implemented semantic search using OpenAI's text-embedding-3-small model and pgvector, indexing ERP entities as high-dimensional embeddings, and querying them via cosine.
- Designed the embedding ingestion layer to automatically upsert vector representations of new records, keeping the knowledge base sync with live data.
- Developed an AI-powered cash flow forecasting feature that aggregates 12 months of historical journal entries, feeds monthly revenue/expense summaries to GPT-4o, and generates confidence-scored forward projections stored as structured records for financial planning.
- Created comprehensive monitoring infrastructure with health checks for all services, Prometheus metrics collection, CloudWatch integration, structured logging with correlation ID tracking for request tracing, and custom business metrics.
- Achieved 2,600+ lines of database schema with 80+ entities, 200+ granular RBAC permissions system, 100+ RESTful API endpoints fully documented with Swagger/OpenAPI, and complete type safety using TypeScript across frontend and backend.
- Mentored junior developers, conducted code reviews, and participated in Agile ceremonies to ensure high code quality and timely delivery.

Senior Frontend Engineer (Angular), Multilent LTD, *Remote*. October 2025 – Nov 2025

- Developed an online examination platform for students using Angular 20, leveraging standalone components and improved reactivity for modern application architecture
- Designed modular architecture utilizing Angular's standalone components feature, improving tree-shaking and reducing bundle sizes while maintaining clear separation of concerns.
- Built comprehensive question bank management system with question creation, editing categorization by subject and difficulty level, and bulk import functionality using reactive forms.
- Developed examination interface with question navigation, timer functionality, auto-save feature, and answer submission workflow using services and RxJs operators.
- Developed responsive design using Tailwind CSS, ensuring optimal experience across devices with touch-friendly interfaces for mobile exam-taking
- Established routing architecture using the Angular router with lazy loading for feature modules and route guards for exam access control.

Backend Engineer (Node.js / Express.js), Bastion Health Oyo, NG. June 2025 – Sept 2025

- Developed backend services using Node.js / Express.js with Typescript for a healthcare platform focused on emergency response.
- Built RESTful APIs for managing all its core features: appointments, patients, treatments, prescriptions, user authentication etc.
- Integrated external services like Brevo and Termii to manage real-time communication (Email / SMS).

- Implemented WebSockets for real-time communication between doctors and patients.
- Utilized Prisma ORM with PostgreSQL and Docker for scalable containerized deployment
- Configured Nginx as a reverse proxy and load balancer to enhance up-time and scalability.

Frontend Engineer (Angular), Technocrat IT Birmingham, UK. Sept 2023 – Sept 2025

- Led frontend development of ERP and Fin-Tech systems using Angular 14 – 17.
- Collaborated with backend engineers and UX designers on architecture decisions, state management, and real-time features using WebSockets.
- Delivered modules like Catalogue, Schedule, and Settings in a scalable, maintainable codebase.
- Collaborated with UX designers and backend engineers to implement interactive and accessible UI components.
- Refactored and optimized legacy code, boosting maintainability and performance, reducing load time by 70%.
- Ensured application quality through unit testing (Jasmine/Karma) and version control using Git.
- Participated in Agile ceremonies (sprint planning, reviews) and used Jira for task tracking.
- Integrated multiple RESTful API's across multiple projects, enabling seamless communication with back-end services and ensuring real-time updates using websockets.

Frontend Engineer (Ionic), Freelance. May 2024 – August 2024

- Built responsive client-side QR-code verification app using Ionic 8.
- Developed core features for QR scanning and real-time product authentication.
- Integrated RESTful APIs for seamless frontend-backend communication, and graceful error handling mechanisms to ensure a beautiful user experience.
- Designed intuitive user flows for scanning, feedback, and product validation
- Implemented OAuth 2.0 authentication flow for both web and mobile platforms, enabling secure, unified user login across Angular (Web) and Ionic (Mobile) versions.
- Conducted performance tuning and front-end testing to improve load speed and reduce bugs.

Ionic Mobile Engineer & Web Developer (Angular & Ionic), Thrively . Oct 2023 – Jan 2024

- Designed hybrid architecture leveraging Ionic 6's web components, Angular 16's standalone components, and Capacitor plugins for native device features including biometrics, secure storage, and notifications.
- Built financial dashboard displaying account balances, transaction history, and spending analytics with real-time updates using Ionic 6 UI components and Angular services.
- Developed money saving functionality and beneficiary management, transaction tracking, and transfer history using Angular's reactive forms and HttpClient.

- Created bill payment module supporting utility bills and airtime purchases with payment history using Ionics native-like UI components.
- Implemented authentication using biometric login (fingerprint, Face ID) with Capacitor's Biometric plugin, Pin setup, JWT token management, and session handling across mobile and web.
- Built notification system using Capacitor's Push notification plugin for alerts and account updates.
- Implemented SDS (Secure Data Storage) using Capacitor's Secure Storage plugin for sensitive data and encryption for data protection.
- Built account settings module with profile management, notification preferences, security settings, and privacy controls leveraging both Ionic and Angular forms.
- Created responsive web and mobile versions: responsive mobile UI both for landscape and portrait mode; responsive web UI for web, tablet and mobile responsiveness, ensuring a seamless UX.
- Optimized mobile performance by leveraging lazy loading and code splitting for smooth UX across platforms.

Frontend Engineer (Angular), ASL E-Admin Lagos, NG. July 2022 – August 2023

- Developed dynamic UI components and interactive dashboards using Angular 12+, with Bootstrap.
- Provided a version upgrade on the project to align with latest development principles from Angular 12+ to Angular 15+.
- Engineered a reliable API communication system between frontend and backend, leveraging Angular HTTP interceptors to handle errors gracefully, reduce user disruption, and maintain data flow integrity.
- Engineered interactive workflows for key business processes (Work Orders, Purchase Orders, Service Requests, GRNs, and Leave Requests), streamlining approval chains and improving task traceability within the ERP system.
- Followed Agile Methodologies, used Git for version control, and participated in code Reviews to ensure code quality.
- Implemented performance optimizations, debugging, and profiling to eliminate bottlenecks and memory issues.

Frontend Engineer (Angular), Osmium LTD. Nov 2019 – May 2022

- Architected and built an ed-tech web platform using Angular 10 connecting professors with PhD students for research opportunities and academic collaboration
- Designed and implemented modular architecture leveraging Angular 11's Ivy compilation, strict mode, and enhanced type checking for improved performance, and faster build times.
- Developed job posting system where professors create research opportunity listings with project descriptions, requirements, funding details, and application deadlines using Angular 12 reactive forms and validation.
- Built student application workflow allowing PhD candidates to browse opportunities, submit applications with CVs and research proposals, track application status, and receive notifications using Angular 12 HttpClient and RxJS.
- Implemented Professor dashboard for reviewing applications, shortlisting candidates, scheduling interviews, and managing research positions with filtering and search capabilities.

- Created dynamic activity feed displaying platform updates, new job postings, application status changes, academic announcements with real-time updates using WebSockets and Angular 12 services.
- Developed professional networking features enabling users to connect with colleagues, send connection requests, manage connections, and build academic networks with connection suggestions.
- Built posting and sharing functionality where users create posts, share research updates, publish articles, and engage with content through likes and comments using Angular 12 components.
- Created and managed the authentication system, email verification, password reset flows, and session management using Interceptors and route guards.
- Created a responsive UI using Angular Material 12 with a mobile-first approach, ensuring seamless UX across desktop, tablet and mobile devices.
- Established routing strategy with lazy loading modules, route guards for authentication and authorization, and optimized navigation using Angular's improved router performance.

Education

Diploma **The Polytechnic Of Ibadan** *Ibadan, Oyo.* **Oct 2018 - Oct 2021**

- Major in Music Technology

Bachelor of Science (BSc) **University Of The People** *Pasadena, California.* **Sept 2023 – In-view**

- Major in Computer Science

Certifications

- ALX Full-Stack Software Engineer
- Microsoft Azure Fundamentals
- Microsoft Azure Security, Compliance, and Identity Fundamentals
- Oracle Cloud Foundations Associate
- Kibo School of Technology Future Proof with Python.

Languages

- English
- Spanish
- Italian
